Director: Prof. Dr. Gert Wörheide

Museum

The Geological Museum Munich (Geologisches Museum München) is a museum that forms part of the Bavarian Natural History Collections. Its permanent exhibition "Earth's Changing Crust" (Erdkruste im Wandel) demonstrates the fundamentals of geology, including topics such as sedimentation, mountain building, volcanism, and plate tectonics. In "Bavaria's Rocky History" (Bayerns steinige Geschichte) the visitors take a journey back into the millions-of-years-old Bavarian past. This exhibition invites the visitors themselves to examine the rocks and stones; these are contained in the drawers of the showcases. A wall newspaper called "Geo-Forum" presents information on current events in geology, such as earthquakes, volcanic eruptions, recent research of general interest, etc.

The museum is a public part of the Bavarian State Collection for Paleontology and Geology.

The museum is directly adjacent to the Palaeontological Museum Munich.
